Manager commentary

Although anxiety about European energy supplies remains chronic, during July investors sensed that the adverse stock market momentum was reversing. The improved tone was most pronounced amongst large companies.

When stock market fluctuations are so volatile. companies listed on the Alternative Investment Market (AIM) can sometimes be overlooked. Hence, within the portfolio whilst the share prices of large companies paying an income appreciated well during July, these were often offset by declines in the share prices of the smaller income paying companies

It isn't unusual for there to be a marked performance differential between a multi-cap equity income strategy such as the Diverse Income Trust and other equity income funds. Longer term we believe the differential favours the Diverse Income strategy, as investing across a wider opportunity set offers the potential to access more companies with sustainable income, as well as the potential for dividend growth. In addition, within a larger opportunity set there can be more income generating companies that have attractive valuations that may have been overlooked. So, for example, there is the potential for income growth by taking profits from those companies that have performed well and which have lower

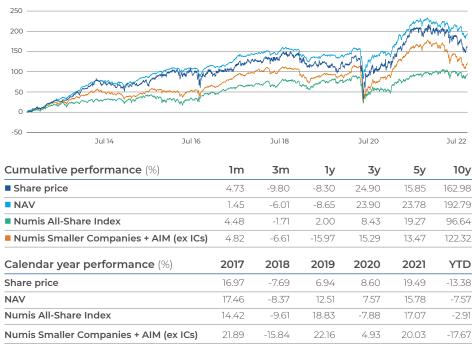

dividend yields and using the proceeds to add new companies into the portfolio which have higher dividend yields.

In July last year we bought a FTSE 100 Index Put Option, a position we have held in the past. The Put Option was bought to potentially mitigate substantial falls in the FTSE 100 Index. Although global markets have been volatile subsequently, the FTSE 100 Index has held up rather better than others, however, the Put Option holding hasn't offset the portfolio setback.

Whilst many UK company trading statements remain robust, we are unconvinced that inflationary pressures are being supressed as much as hoped Alongside, we expect rising interest rates could lessen market liquidity (the ability to buy or sell assets easily), and hence stock markets could remain volatile. The cost of a FTSE 100 Index Put option fell low enough in the second half of July to justify extending the length of the current holding. Therefore, we extended the length of the trust's FTSE 100 Index Put option from December 2022 to December 2023, at a potential cost (if FTSE 100 Index doesn't suffer a significant setback) of around 1% per annum to the trust's performance.

Charges

■ FTSE Fledgling

■ Cash

Ongoing charges figure (OCF)	1.05%
as at 31.05.2022	

The ongoing charges figure (OCF) is not the same as the ongoing costs figure set out in the Company's key information document. The key differences are that gearing costs and portfolio transaction costs are not included in the OCF. In addition costs are calculated on slightly different bases. The OCF figure set out above mirrors that in the Report and Accounts and is based on costs incurred in the year which are likely to recur in the foreseeable future. The ongoing costs figures in the key information document provide investors with the impact costs have had on returns averaged over the five year recommended holding period.

*Management fee on market capitalisation

Fund management fees are tiered and calculated based on the share price, so may vary in each year. With effect from 1 August 2019, the Manager received a management fee of 0.9% per annum on the adjusted market capitalisation of the trust up to £300m, 0.8% per annum on the average market capitalisation between £300 and £500m and then 0.7% per annum on the average market capitalisation above £500m.

General risks

All types of investment carry a degree of risk. It is possible you could lose some, or all, of the money you invest. The level of risk varies depending on the type of investment.

Typically, you are less likely to lose money over the long term from an investment that is considered low risk, although potential returns may also be lower. Investments considered higher risk typically offer greater opportunities for better long-term returns, though the risk of losing money is also likely to be higher.

When you invest, it is important that you understand the risk to your money and are comfortable with that level of risk. If you are unsure, we would recommend that you consult a financial adviser.

Past performance of an investment is not an indication of how it will perform in the future. The value of your investment and any income generated by your investment can go down as well as up, and you could get back less than you invested.

The value of your investment might not keep up with any rise in the cost of living.

You could lose money if financial markets fall. There is no guarantee that the investment objective of the trust will be achieved. The levels of taxation that apply to income or capital gains from the trust, including any tax relief that may be available, will depend on your personal tax situation.

Trusts with similar objectives may not perform in the same way as they are likely to have different holdings or hold different amounts of the same investment.

Performance will be affected by investment decisions made by the fund managers..

Other risks

Some of the main specific risks of investing in this trust are summarised here.

Derivative

A contract whose value is based on the change in price of a specific asset or index. When derivatives are used within a trust, it doesn't necessarily increase risk. However, price changes in the underlying asset can translate into big swings in the value of derivatives (up and down), which has a direct effect on the value of the trust.

Dividends

In certain market conditions companies may reduce or even suspend paying dividends until conditions improve. This will impact the level of income distributed by the Trust.

Equities

Equities (shares) can experience high levels of price fluctuation.

Geographic concentration

Trusts that have a strong focus on a particular country or region can carry a higher risk than trusts with a more diversified portfolio.

Hedging

A hedge is designed to offset the risk of another investment falling in price. It can also act as a limit on potential gains if the investment that has been hedged increases in value.

Inflation

Higher inflation can lead to some investments falling in value, particularly those with a fixed level of interest, for example government bonds and corporate bonds.

Infrastructure

Investments are often in large-scale projects whose profitability can be affected by supply problems or rising prices for raw materials or natural resources. Changes in the wider economy and government regulation can also have a significant influence.

Interest rate

Changes in central bank interest rates can affect all types of assets, in particular, securities such as government bonds and corporate bonds that generally offer a fixed level of interest. If interest rates go up, the value of a bond may fall, and vice versa.

Legal and tax

The income or capital gains from investments can sometimes be affected by changes in legal and tax regulations or how these rules are applied.

Liquidity

In some instances, for example, when market conditions generally are difficult, holdings in a trust may be difficult to sell and buy at the

desired price. The trust value could fall as a result.

Operational

Processes, systems and controls around your investment might fail. The more complex or unusual the investments that the trust holds, the more likely this is to happen. For example, developing markets may have less reliable systems or lower standards of governance than more developed markets.

Property and Real Estate Investment Trusts
Property values can rise and fall sharply
depending on the strength of a country's
economy.

Put-options

A type of derivative. Put-options can be used for a number of reasons. For example, they can be used to protect the value of an underlying investment or group of investments against a fall in value. They can be thought of as an insurance policy. These can make a trust more volatile from time to time

Smaller companies

Investment in smaller companies is typically higher risk than investment in larger companies. Shares in smaller companies can experience greater levels of volatility.

Ratings, awards and other information

Glossary

Annual management charge (AMC)

The yearly fee paid to Premier Miton for managing a fund, expressed as a percentage of your investment. The AMC does not typically change from year to year.

Different groups of investments such as company shares, bonds, commodities or property.

Bonds (or fixed income)

Types of investments that allow investors to loan money to governments and companies, usually in return for a regular fixed level of interest until the bond's maturity date, plus the return of the original value of the bond at the maturity date. The price of bonds will vary and the investment terms of bonds will also vary.

Capital

Describes financial assets, particularly cash, or other assets, such as shares, owned by a person or organisation.

Capital growth

The increase in the value of an asset or investment over time, measured by its current value compared to its purchase

Collective Investment Schemes

A generic term for investment funds with more than one investor, such as unit trusts, Open Ended Investment Schemes (OEICs) and investment trusts.

Dividends

The portion of its capital that a company chooses to return to its shareholders. For a fund or trust, this is the payment of fund's income to its shareholders.

Another name for shares (or stock) in a company

FTSE 100 Put Option

A type of derivative contract in which the underlying value is based on the level of the FTSE 100 index which tracks the performance of the top 100 largest companies by market value listed on the London Stock Exchange. Such contracts can be used to protect the value of an underlying investment or group of investments against a fall in the value of those 100 largest companies and can be thought of as an insurance policy.

Gearing

The level of a company's debt in relation to its capital. A company with significant debt compared to its capital is considered to be highly geared

Individual Savings Account (ISA)

A type of tax-free scheme, set up by the government, designed to help people make the most of their savings and investments. All income and gains from an ISA investment are exempt from UK Income Tax and Capital Gains Tax. HM Revenue and Customs sets the maximum amounts that you are allowed to invest into an ISA each

Net Asset Value (NAV)

The total of a company's assets minus its liabilities. The net asset value per share is

the total of a company's assets minus its liabilities divided by the number of shares in issue

Ongoing Charges Figure (OCF)

A measure of what it costs to invest in a fund over a year. It includes the fee paid to Premier Miton for the management of the fund (known as the annual management charge), with the remainder covering costs that have to be paid to external companies for other services relating to the ongoing administration and management of a fund, such as the fees paid to the depositary, custodian, regulator, auditor and administrator. The fee is deducted from the value of the fund and reflected in the fund's share price. The OCF is typically calculated once a year and can change from year to year.

Total return

A way of showing how an investment has performed, and is made-up of the capital appreciation or depreciation and includes any income generated by the investment. Measured over a set period, it is expressed as a percentage of the value of the investment at the start of that period.

The dividend per share divided by the stock's or fund's price per share and expressed as a percentage. The historic yield is the dividend income distributed during the past year and expressed as a percentage of the share price on a particular day.
