# JPMorgan Japan Small Cap Growth & Income plc

## Fund overview

ISIN	Sedol	Bloomberg	Reuters
GB0003165817	0316581	JSGI LN	JSGI.L

**Objective:** To produce long-term capital growth through investment in small and medium-sized Japanese companies. Investment is permitted in Japanese quoted companies, other than the largest 200, measured by market capitalisation, emphasising capital growth rather than income. The Company has the ability to use borrowing to gear the portfolio and its current policy is to operate within the range of 5% net cash to 15% geared in normal market conditions. The Company pays quarterly dividends without compromising on the objective of achieving capital growth, funded from dividends from investment holdings and capital reserves, equivalent to 1% of its net asset value, set on the last business day of each financial quarter.

Portfolio manager(s)	Company assets	Potential gearing range
Miyako Urabe (2022)	£208.0m	-10% to 25%

	11 Apr 2000	<b>Performance fee</b> No
	<b>Discount(-)/Premium</b> -10.8%	

## ESG information

### ESG approach - Integrated

ESG Integration is the systematic inclusion of financially material ESG factors, alongside other relevant factors, in investment analysis and investment decisions with the goals of managing risk and improving long-term returns. ESG integration does not by itself change this product's investment objective, exclude specific types of companies or constrain its investable universe. This product is not designed for investors who are looking for a product that meets specific ESG goals or wish to screen out particular types of companies or investments, other than those required by any applicable law such as companies involved in the manufacture, production or supply of cluster munitions.

## Key risks

Exchange rate movements between the pricing currency of the underlying overseas investments held by the Company and sterling (the base currency of the Company) can cause the Company's NAV (in sterling terms) to go up as well as down. For example, if sterling appreciates relative to Japanese yen, the value of the NAV in sterling terms will be negatively impacted; if sterling depreciates, the value of the NAV in sterling terms will be positively impacted.

External factors may cause an entire asset class to decline in value. Prices and values of all shares or all bonds could decline at the same time, or fluctuate in response to the performance of individual companies and general market conditions.

This Company may utilise gearing (borrowing) which will exaggerate market movements both up and down.

This Company invests in smaller companies which may increase its risk profile.

The share price may trade at a discount to the Net Asset Value of the Company.

The single market in which the Company primarily invests, in this case Japan, may be subject to particular political and economic risks and, as a result, the Company may be more volatile than more broadly diversified companies.

## General Disclosures

Investment is subject to documentation. The Annual Reports and Financial Statements, AIFMD art. 23 Investor Disclosure Document and PRIIPs Key Information Document can be obtained free of charge in English from JPMorgan Funds Limited or [www.jpnam.co.uk/investmenttrust](http://www.jpnam.co.uk/investmenttrust).

This material should not be considered as advice or an investment recommendation. Company holdings and performance are likely to have changed since the report date. No provider of information presented here, including index and ratings information, is liable for damages or losses of any type arising from use of their information. No warranty of accuracy is given and no liability in respect of any error or omission is accepted.

To the extent permitted by applicable law, we may record telephone calls and monitor electronic communications to comply with our legal and regulatory obligations and internal policies. Personal data will be collected, stored and processed by J.P. Morgan Asset Management in accordance with our EMEA Privacy Policy [www.jpnam.com/emea-privacy-policy](http://www.jpnam.com/emea-privacy-policy)

Risk Indicator - Based on share class volatility for the past 5 years. See Key Information Document (KID) for details.

Ongoing charges are the management fee and all other operating expenses, excluding interest charges on any borrowing and any performance fee payable expressed as a percentage of the average daily net assets during the year unless where indicated. All the figures are for the previous financial year. For information on ongoing charges please refer to the Company's Annual Report and Accounts. [www.jpnamjapansmallcapgrowthandincome.co.uk](http://www.jpnamjapansmallcapgrowthandincome.co.uk)

## Performance information

Source: J.P. Morgan Asset Management/Morningstar. Net asset value performance data has been calculated on a NAV to NAV basis, including ongoing charges and any applicable fees, with any income reinvested, in GBP.

NAV is the cum income NAV with debt at fair value, diluted for treasury and/or subscription shares if applicable, with any income reinvested. Share price performance figures are calculated on a mid market basis in GBP with income reinvested on the ex-dividend date. The performance of the company's portfolio, or NAV performance, is not the same as share price performance and shareholders may not realise returns which are the same as NAV performance.

Indices do not include fees or operating expenses and you cannot invest in them.

Prospective dividend yield is for the investment trust's current financial year. It is indicative only and based on the latest month end mid-market price and the declared and net prospective dividends for the current financial year.

Prior to 01/04/21 the benchmark was S&P Japan Small Cap Net Return Index.

JPMorgan Asset Management (UK) Limited Registered address: 25 Bank Street, Canary Wharf, London E14 5JP, United Kingdom. Authorised and regulated by the Financial Conduct Authority. Registered in England No. 01161446.

## Definitions

**Benchmark comparison** Comparison of the Company's performance is made with the benchmark. The benchmark is a recognised index of stocks which should not be taken as wholly representative of the Company's investment universe. The Company's investment strategy does not follow or track this index and therefore there may be a degree of divergence between its performance and that of the Company.

**Gearing** Gearing represents the excess amount above shareholders' funds of total investments (excluding liquidity fund holdings) expressed as a percentage of the shareholders' funds. If the amount calculated is negative, this is known as a "net cash" position.

**Discount/Premium** If the share price of an investment company is lower than the net asset value (NAV) per share, the company is said to be trading at a discount. If the share price of an investment company is higher than the net asset value (NAV) per share, the company is said to be trading at a premium. The discount/premium is shown as a percentage of the NAV.

**NAV** The value of investment and cash, including current year revenue, less liabilities (prior charges such as loans, debenture stock and preference shares at fair value).

**Cash** A company's net exposure to cash / cash equivalents [includes investment in liquidity funds and treasury stocks if held] expressed as a percentage of shareholders funds after any offset against its gearing.

**Correlation** measures the relationship between the movement of the fund and its benchmark. A correlation of 1.00 indicates that the fund perfectly matched its benchmark.

**Alpha (%)** a measure of excess return generated by a manager compared to the benchmark. An alpha of 1.00 indicates that a fund has outperformed its benchmark by 1%.

**Beta** a measure of a fund's sensitivity to market movements (as represented by the fund's benchmark). A beta of 1.10 suggests the fund could perform 10% better than the benchmark in up markets and 10% worse in down markets, assuming all other factors remain constant.

**Annualised volatility (%)** an absolute measure of volatility and measures the extent to which returns vary up and down over a given period. High volatility means that the returns have been more variable over time. The measure is expressed as an annualised value.

**Sharpe ratio** measures the performance of an investment adjusting for the amount of risk taken (compared a risk-free investment). The higher the Sharpe ratio the better the returns compared to the risk taken.

**Tracking error (%)** measures how much a fund's returns deviate from those of the benchmark. The lower the number the closer the fund's historic performance has followed its benchmark.

**Information ratio (IR)** measures if a manager is outperforming or underperforming the benchmark and accounts for the risk taken to achieve the returns. A manager who outperforms a benchmark by

2% p.a. will have a higher IR than a manager with the same outperformance but who takes more risk.
