GreenTech commences 8,300m Whundo and Munni Munni drill program

Highlights

- Drilling commenced as planned at the Whundo Cu-Zn-Au Project (Whundo) and Munni Munni PGE-Cu-Ni Project (Munni Munni) in the West Pilbara, Western Australia[1].
- The 8,300m exploration program comprises 4,750m of Reverse Circulation (RC) drilling and 3,560m of Diamond Drilling (DD), including wider-diameter diamond drilling to support metallurgical composite collections at Whundo.
- One drill rig has been mobilised to site with a second drill rig anticipated to join the program following completion of additional heritage clearances.
  - 8-day Munni Munni heritage survey scheduled to commence 10 August 2026, to clear new drill locations and access across the mineralised footprint and high-priority basal zone target areas.
  - Ahead of heritage survey completion, drilling will prioritise high potential Cu-Au extensions at Whundo, and drilling from existing cleared pads at Munni Munni.

GreenTech Metals Ltd (ASX: GRE) (**GreenTech**) is pleased to announce that its exploration program is underway at the Whundo Cu-Zn-Au Project (Whundo) and Munni Munni PGE-Cu-Ni Project (Munni Munni) in the West Pilbara, Western Australia.

Chief Executive Officer, James Rattenbury, commented:

"The Whundo drill program is designed to extend the high-grade copper-gold footprint, while also providing a metallurgical sample to allow testwork on gold and silver recoveries, a key requirement for including precious metals in an updated resource estimate.

"At Munni Munni, we've deliberately structured optionality into the program so that drilling can commence from existing cleared pads while the scheduled heritage survey clears additional target areas.

"Ongoing review of our West Pilbara projects while planning for the drill program has highlighted clear addressable upside we expect to continue unlocking throughout the program."

Reverse Circulation & Diamond Drilling Program[1]

One drill rig has been mobilised to site, and a second rig is expected to arrive once additional areas have heritage clearance. The exploration program underway comprises 4,750m RC and 3,560m DD, allowing for wider-diameter diamond drilling to support metallurgical composite collections at Whundo.

Follow-up drilling at Whundo has been designed to demonstrate extensions of known high-grade copper-gold mineralisation that will also allow the collection of a metallurgical sample to enable inclusion of gold and silver in the updated Mineral Resource Estimate (MRE)[1]. At Munni Munni, initial drill locations have been limited to existing drill pads, with further access dependent on completion of a heritage survey at Munni Munni in August.

Next Steps

Heritage Survey[1]

An 8-day heritage survey at Munni Munni is scheduled to commence on 10 August 2026. The survey is designed to clear new drill locations and access routes across the Munni Munni mineralised footprint, as well as other high-priority basal target areas that may be identified by ongoing geophysical work at the Project. Drilling from existing pads will allow full rig utilisation across both Munni Munni and Whundo, ensuring drilling activity can commence and continue with minimal downtime as access to new target areas is cleared.

About GreenTech Metals

GreenTech Metals Limited (ASX: GRE) is an exploration and development company focused on advancing a globally significant critical mineral and precious metal hub in the premier West Pilbara mining region of Western Australia. The Company has successfully consolidated a dominant >500km^2 landholding, establishing GreenTech as one of the largest tenement holders in the district.

The Company's core strategy is centred on two outstanding, highly complementary deposits located only 10km apart:

- **The Munni Munni Project (PGE-Cu-Ni):** One of Australia's most significant Platinum Group Element (PGE) layered mafic intrusions. The project hosts a large, laterally continuous reef historically proven to contain platinum, palladium, rhodium, gold, copper, and nickel.
- **The Whundo Project (Cu-Zn-Au):** An advanced, high-grade brownfield Volcanogenic Massive Sulphide (VMS) copper-zinc-gold project with significant resource expansion potential across a highly prospective structural corridor.

By consolidating the Munni Munni and Whundo Projects alongside the broader underexplored West Pilbara tenure, GreenTech Metals is executing a targeted vision to discover, define, and develop a multi-commodity district to supply the growing demands of the green energy and critical minerals markets.
